技术随笔

正确设置vnstat统计VPS流量

admin (https://blog.extlux.com/author/admin/) 2018年10月19日

(https://blog.extlux.com/2018/10/19/%e6%ad%a3%e7%a1%ae%e8%ae%be%e7%bd%aevnstat%e7%bb%9f%e8%ae%a1vps%e6%b5%81%e9%87%8f/)

安装好云探针后，部分服务器的流量统计不正确。

首先有可能是网卡名字与配置文件不同导致的，如果网卡名字不是叫eth0的那么修改/etc/vnstat.conf这个文件把Interface “eth0”改成正确的网卡名字就好了。

重启服务后大部分VPS都正确显示流量了。

但仍有部分VPS无法正确显示月流量。

需要给这个网卡创建一个数据库来存放监控数据

```
[root@vultr etc]# vnstat -u -i eth0
Error: Unable to read database "/var/lib/vnstat/eth0".
Info: -> A new database has been created.
```

这个是权限问题，修改eth0这个文件的权限就好了

chown vnstat:vnstat eth0

之后重新创建数据库

vnstat -u -i eth0

重启一下vnstat的服务

service vnstat restart

一些常用参数

vnstat -l – 查看当前实时流量

vnstat -d – 查看当天流量

vnstat -m – 查看当月流量
